DETAILED ACTION

Response to Amendment

Applicant's arguments filed on 4/16/02, paper #5. Claim 43 are newly added.

Applicant's arguments with respect to claims 1-43 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-43 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown et al (US Patent 6,336,116).

As per claim 1, Brown teaches a system initiates a search for user specified data comprising: receiving a request to navigate from a site page to a site home of the network site (col. 2, lines 60-67);

wherein a site home is found for the network site, navigating to the site home in response to the received request (col. 6, lines 45-55).

As per claim 2, Brown teaches the step of wherein a site home is not found for the network site, communicating to the user that the site home was not found (col. 6, lines 45-55, col. 8, lines 31-41).

As per claim 3, Brown teaches the step of determining a site home for the network site further comprises locating the address of the site home by identifying a characteristic label assigned to the site home (col. 8, lines 42-67, col. 9, lines 34-54).

As per claim 4, Brown teaches the step identifying a characteristic label further comprises: retrieving a hypertext markup language (HTML) <Header> metatag associated with the site page (fig. 12a);

determining if HTML <Header> metatag includes a <Title/> tag (fig. 12b, # 2, # 3);

determining if the <Title/> tag includes a characteristic label; determining that the site page is the site home, if the <Title/> tag includes a characteristic label (fig. 12b, # 87b, #87c); and

from other components of the address (fig. 6a-2,
<http://www.mysite.com/widgets/index.html>); and

parsing the address of the site page into its constituent address components

wherein one of the parsed address components comprises the address of
the site home (fig. 6a-2, [/widgets/index.html](#)).

as per claim 7, Brown teaches wherein the address comprises the uniform resource locator
(URL) of the site page (col. 1, lines 59-60, col. 2, lines 20-21).

As per claim 8, Brown teaches wherein the separator comprises at least one of a slash ("/")
and a double slash ("//") and wherein the address of the site home is separated from the rest of the
uniform resource locator (URL) of the site page by a leading double slash ("//") and a trailing slash
("/") (fig. 6a-2, <http://www.mysite.com/widgets/index.html>).

As per claim 9, Brown teaches the step of determining a site home for the network site further
comprises:

Reading the address of the site page wherein the address comprises at least two
address components each separated by a separator

<http://www.mysite.com/widgets/index.html>); and

parsing the address of the site page into the one or more address components (fig. 6a-2,
[/widgets/index.html](#));

comparing each of the parsed address components to an index of stored site home

addresses wherein the parsed address component matching a stored site

home address comprises the address of the site home (fig. 9, col. 8, lines 3-67, col.
9, lines 1-16).

As per claim 10, Brown teaches wherein the address comprises a uniform resource locator

As per claim 12, Brown teaches wherein the step of determining the site home for the network site further comprises:

detecting if a site map exists for the network site; and interrogating the site map to identify an address of the site home from the site map, if a site map is detected (fig. 9, col. 8, lines 3-67, col. 9, lines 1-16).

As per claim 13, Brown teaches wherein the address comprises a uniform resource locator (URL) associated with the site home (col. 1, lines 59-60, col. 2, lines 20-21).

As per claim 14, Brown teaches wherein the step of determining the site home for the network site further comprises:
